

Set up SJPNET in Windows XP

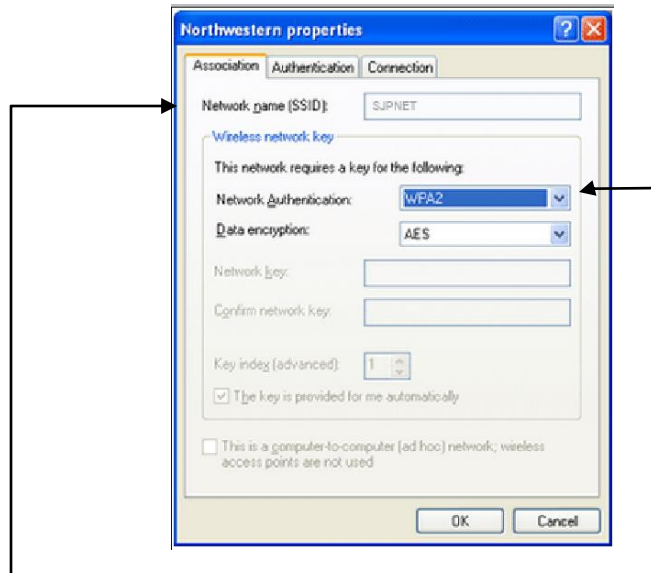

1. Open your “Network connections” and *Right-click on* “Wireless Network Connections”.

2. Select the **Wireless Networks** tab. A window similar to the following will appear:

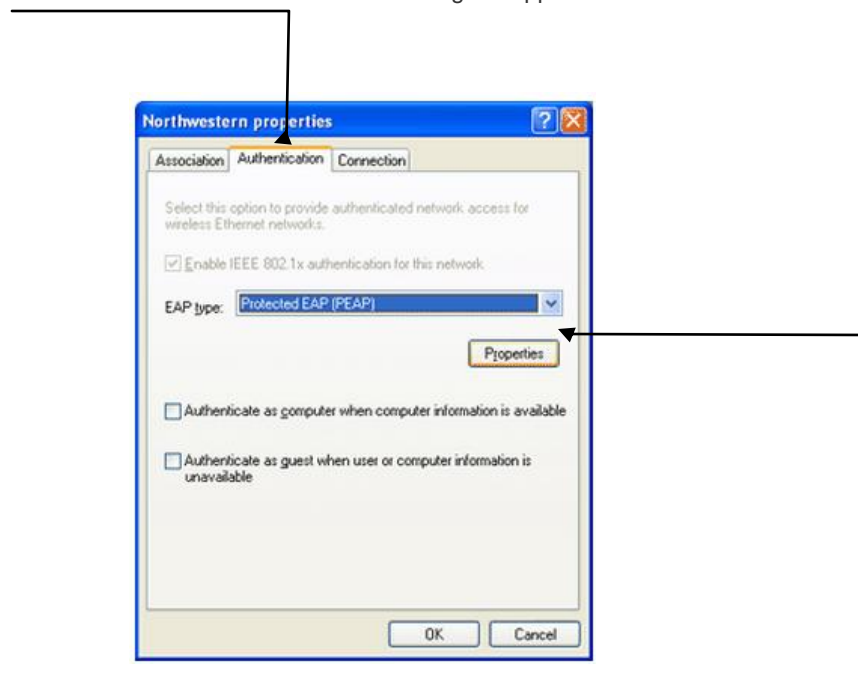

3. Click the **Add...** button. A window similar to the following will appear:

- I. Type **SJPNET** into the **Network name (SSID)**: field.
- II. Select **WPA** from the **Network Authentication**: drop-down menu.
Select **AES** from the **Data encryption**: drop-down menu.

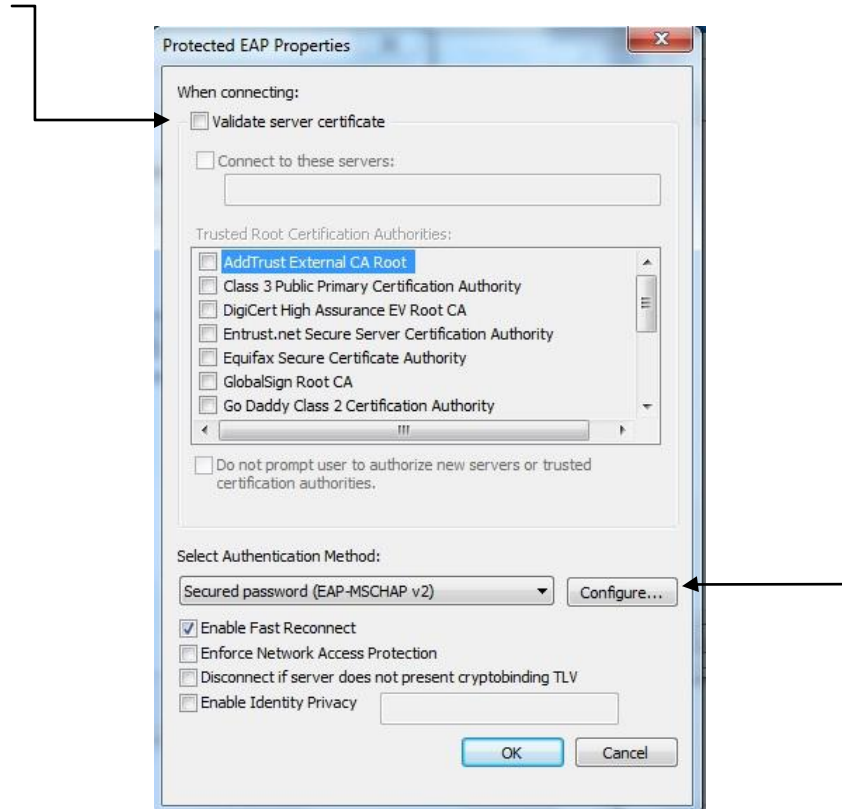

4. Select the **Authentication** tab. A window similar to the following will appear:

- I. Select **Protected EAP (PEAP)** from the **EAP type**: drop-down menu and click properties.

II. **Un-Check** "Validate server certification".

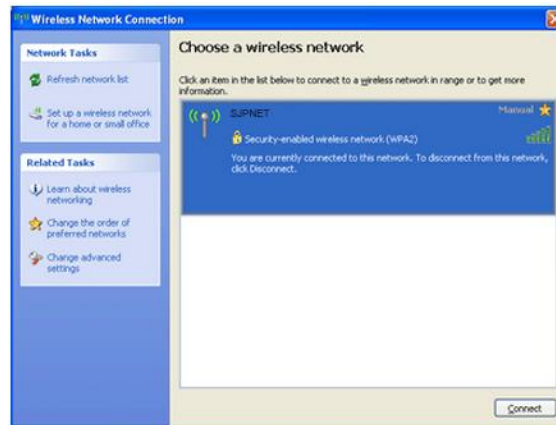

Then click "Configure"

- a. **Un-check** the **Automatically use my Windows logon name and password (and domain if any)** checkbox if it is checked.
- b. **Click OK** to save your changes.

5. **Click OK** to close the **Protected EAP Properties** window.
6. **Click OK** to save your changes.

7. *Right-click* **Wireless Network Connection**, then *select* **View Available Wireless Networks**. A window similar to the following will appear:

8. To connect to the Northwestern wireless network, highlight **SJPNET**, and then *click* the **Connect** button.

Note: If this is the first time that you connect, a notice similar to the following will appear in your system tray:

15. Click on the icon in the system tray. A window similar to the following will appear:

- a. *Type* your username into the **User name:** field.
- b. *Type* your password into the **Password:** field.
- c. *Click* **OK**.
